

Why Choose Sustainable Transportation?

Whether you bus, bike, walk, carpool, or vanpool, every sustainable trip you take supports your community.

Choosing sustainable transportation reduces congestion.

More people choosing sustainable transportation means fewer cars on the road. This improves road safety and increases comfort and mobility for non-motorized travel.

Public transit improves air quality.

Public transit uses cleaner fuels, such as compressed natural gas and electricity, which improves air quality compared to gas- and diesel-fueled vehicles.

Embrace stress-free travel.

Riding public transit frees up time during your day that can be spent reading, studying, or relaxing instead of watching the road and finding parking.

Sustainable transportation improves your health.

People who choose sustainable transportation are three times more physically active throughout the day compared to people who don't.

Save money.

People who regularly choose sustainable transportation options save money on gas, vehicle maintenance, and parking fees.

Reduce your risk of collisions.

Public transit is ten times safer than traveling by car. Source: National Safety Council
